

**LESS COMPLICATED
FORM**

SIMPLY. SMARTER. GREEN ROOFS.

**MORE INTELLIGENT
FUNCTION**

Xero Flor roofs succeed because the real work happens on the ground; fully grown, low-maintenance vegetated mats are rolled up and installed like sod onto rooftops... fast, easy, instant green roofing.

Xero Flor green roof systems use a patented, textile-based design that is modified for regional North American climates and the technical and aesthetic requirements of each individual project.

Xero Flor systems offer lightweight, minimal maintenance green roofing ranging from 8 lbs to 25 lbs per square foot with specialized plant selection of mosses, succulents and native perennials.

FORM

Green roofs provide...

... for building owners

- Reduced thermal loading
- Reduced energy costs
- Restoration of habitat
- Extended roof lifetime
- Natural beauty to the building

... for municipalities

- Reduced stormwater runoff
- Reduced Urban Heat Island
- Reduced particulate load
- Reduced waste generation
- Acoustic buffering
- Habitat islands

... for the environment

- Removal of greenhouse gases
- Removal of rainwater pollutants
- Generation of oxygen
- Habitat for pollinators
- ...and more!

FUNCTION

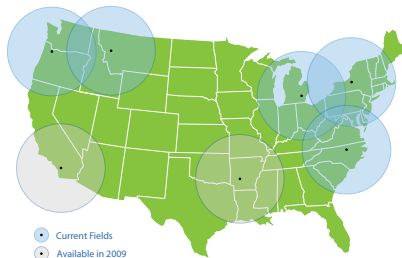

Developed in Germany more than 30 years ago, Xero Flor green roof systems have been used on thousands of projects worldwide, provided by franchise operations in France, United Kingdom, Poland, Sweden, Canada, U.S.A, and more.

Xero Flor America, LLC was formed in 2002 as part of the initial development of commercial green roofing in North America. XFA was born out of extensive academic research, industrial partnership, and German technological experience. We maintain a continuous R&D program to expand the range of green roof options throughout the U.S.

Xero Flor America is the sole provider of superior Xero Flor green roof technologies in the U.S.A. XFA has supplied projects ranging from small residential add-ons to multi-acre industrial facilities, such as the 454,000 square foot green roof on the Ford Dearborn Truck Plant.

As part of our commitment to provide border to border, coast to coast green roof resources, we operate a network of dedicated pre-cultivation facilities across the continent. Xero Flor production farms offer pre-grown vegetation mats with regionally adapted plants, locally resourced materials, and additional LEED point credit opportunities.
