Pump Tips

- Total volume of pond should be turned over approximately once per hour.
- Calculate approximate gallons in an existing pond.
 Average: WIDTH x LENGTH x DEPTH = Pond Volume (Cubic Feet).
 1 Cubic Ft. = 7.48 gallons
- Total head is calculated by how high above the water level the pump must push the water. Also every 10' of horizontal travel, or 90 degree elbow, adds one foot of head height.

Specific pump head height output charts are in the Aquascape catalog.

Rock & Gravel Calculations

Boulders in the Pond

Smaller, Simple Pond Calculation (up to 11'x16')
Formula: Length x Width / 65 = Tons
-Tip: Use a mixture of 6-12" & 12-18" boulders for a natural look

Larger, Elaborate Pond Calculation (11'x16' & larger)
Formula: Length x Width / 40 = Tons
-Tip: Mix small, medium, & large boulders using a 1:2:1 ratio

Boulders in the Stream

Formula: 1-1/2 tons of boulders for every 10' of stream length
-Tip: Incorporate larger stones to shape & naturalize the stream

Boulders for the Waterfall

Small Waterfall = 1 ton of assorted boulders
Medium Waterfall = 1-1/2 tons of assorted boulders
Large Waterfall = 2 to 3 tons of assorted boulders
-Tip: Frame the waterfall with larger boulders to naturalize the cascade

Gravel in the Pond

Smaller, Simple Pond Calculation (up to 11'x16')
Formula: 45% of the total quantity of pond boulders (.45 x tons of stone)

Larger, Elaborate Pond Calculation (11'x16' & larger)
Formula: 30% of the total quantity of pond boulders (.30 x tons of stone)

Gravel in the Steam

Formula: 30% of the total quantity of stream boulders (.30 x tons of stone)

Pondless Waterfall Calculations

Gallons in the Basin with Rock

Formula: L x W x D x 2.2

Water in a Stream

Formula: L x W x .25 x 7.48

Gallons needed in the Basin

Formula: Twice the volume of water in the stream (L x W x .25 x 7.48 x 2)

Sizing the Basin (once gallons needed is determined)

Formula: Gallons needed / 2.2 / average depth = sq.ft. needed
-Tip: Always oversize the basin rather than undersize it

Quantity of Stone in a Pondless Basin w/o AquaBlox

Formula: 100 lbs. per cubic foot (L x W x D = cu.ft.)
-Tip: In a Micro basin use all 1.5 - 2" gravel
-Tip: In a large basin use 40% 4"-6" boulders & 60% 1.5 - 2" gravel

Small AquaBlox Quantity

Formula: Cubic foot of basin x 7.48 / 17 = number needed
-Tip: To figure gallons, multiply number of AquaBlox needed by 17

Large AquaBlox Quantity

Formula: Cubic foot of basin x 7.48 / 32 = number needed
-Tip: To figure gallons, multiply number of AquaBlox needed by 32
